

*You are so far away and so often in my mind*

### News from KROK...

**Alumni of KROK UAA are actively participating in KROK Career Camp**, the annual two-week camp for senior students, that aims to prepare them for the first job. This year the Career Camp is held on 11-22 April and precedes the job fair, that will be organized in late April.

The program on April 11 included Couch Session on building a future career, setting professional goals up to 2020, creating a career plan, mapping visualization of future career and what is very important - getting motivated to achieve professional goals. On April 12, 2016 Business breakfast with successful practitioners, managers, executives and entrepreneurs was held. The event was organized in a comfortable atmosphere – with a cup of coffee and cakes the students acquired the best practices of business professionals, became motivated by success stories and received tips on how to become specialists, build career and achieve success. Alumni share information on the realities of the labor market, working conditions for young professionals, salaries and career prospects in the industry, shared experience on solving of real business problems, that significantly increases the chances of getting dream job.

On the pictures you see the speakers of Business breakfast - entrepreneurs-alumni of KROK University and the students, participants of the event.

KROK Career Camp is created to help students to set goals of their career for the next 5 years and develop a plan to achieve them. The most appropriate jobs for the students are selected. The students learn to create resumes to interest the employer, place their profiles on the most popular employment websites, learn how to present themselves at the interview with the employer and overcome stress.

### School of IT in KhNURE...

"Many American students want to study in Ukraine, bearing in mind that any scientific potential has maintained since the Soviet times", - said American businessman known Ukrainian investor Michael Blazer at a meeting with students and professors of Kharkiv National University of Radio Electronics held April 8.

He graduated from the Faculty of Electronic Engineering more than 40 years ago and received a specialty "Digital electronics and quantum physics." After graduation, he emigrated to the United States, built a career managing large companies, but after the collapse of the Soviet Union began to work closely with the business for independent Ukraine.

Michael Blazer told the audience about his life from an engineer to the control of large corporations and the founder of investment funds.

"Many people come to the United States or Europe and just looking for a place to study, wanting to get a foreign diploma. I, having the engineering degree, went to work immediately. All I know now and I am able to do build on the basis of NURE Education. "

Back in Ukraine, he was persuaded to persistent friends, who did not lose faith in a bright future of the country.

"When I first came to independent Ukraine, the first impression was a frustrating experience: the ruined enterprise, uncertainty. But what I saw in the eyes of the people here a lot of potential, that pushed me to work with local companies. "

In his conversation with the students Blazer repeatedly touched the educational system of Ukraine.

"Ukraine has inherited the reputation of a country with a strong scientific potential and efficient educational system. So far, it is known as a country where they prepare good physicists, mathematicians, scientists in the field of astronautics. We need to build on this a marketing strategy and to attract foreign students. Even many American students want to learn a lot from our professors, if they had the chance. Therefore, it is necessary to develop a student exchange program. I'm sure they would be in a great demand among the students from American universities ", - says Michael.

And finally, Michael Blazer advised students to apply to study consciously. He stressed that any area of science teaches man to think and that is the ability to acquire university graduates. The rest is secondary.
